

PKX's Camera Inspection Service is fully equipped with the supplies needed to perform an inspection of pipelines that range from 12.5 to 200 inches in diameter and up to 984 feet in length.

The trailer is equipped with a mobile command station containing onboard computer systems that record inspections and produce photos and video. The camera is high-resolution, low-light, pan-and-tilt with launch capabilities up to an additional 147 feet.

PKX's Camera Inspection trailer can be easily hooked up to either a provided electric supply, or operated off of its own generator in remote areas.
